Electric Time Company has been in continuous operation since the early 1900’s. We are an offshoot of Telechron, the first self-starting synchronous electric clock company. Incorporated in the state of Massachusetts, USA, in 1928, we have grown to a firm that has thousands of tower clock and street clock installations on every continent.

Our current 50,000 square foot (4,645 square meter) facility allows us the space and resources to design, manufacture and support our products. Standard and custom tower and street clocks are designed by our full time engineering department using state of the art 3D modeling software. We make our own clock movements and properly design them to fit in the enclosure or surrounding structure. If the clock is lighted, we make sure there are no shadows and the clock is evenly lighted with the correct color temperature. In the case of clock hands and structures, we perform FEA analysis (finite element analysis) on the design to be certain they will stand up to wind and environmental conditions.

After a product is designed, it’s typically sent to our 6’ x 12’ CNC controlled waterjet cutting machine and then to fabrication in one of our multiple welding and fabrication stations. In addition to the work stations, we employ rolling machines, an 11’ x 11’ CNC router and a 175 ton CNC controlled press brake for bending metal to fabricate our clocks.

Electric Time has a complete metal finishing department - offering line & circle graining and polishing, on almost any metal. Our paint finishes are applied in environmentally controlled chambers and have been tested by a National Testing Lab for UV stability, abrasion and corrosion resistance.

Products are assembled by our skilled technicians, inspected by our quality department and then shipped in engineered crates to your project location.

As required by electrical codes, by OSHA and by most insurance companies, our products are listed for electrical safety under CUL (Canadian UL) UL and ETL.

Installation, service and support is available worldwide. We keep meticulous records of your project - both electronic and paper. Unique in almost any industry, we can still repair any of our products, including those dating back to the 1920’s.

Our dedicated and professional staff, who have been with us on average over 15 years, looks forward to assisting you on your next project.
1000 SILHOUETTE - MARKERS ON WALL

12”/30CM- 40’/1220CM
Part Number: 10XX

40900/42900 GALLERY CLOCK

Product Description

• Style 409XX and 429XX Clocks are an indoor clock based on the design of a clock manufactured in the early 1900’s. Larger sizes are appropriate for large public spaces. The clock design consists of a spun metal case, electric movement (battery available on 15” size). Standard dial markings design “F1” and hands “FS”. The case is furnished with an antique brass finish, polished brass finish, or painted finish. On special order any of our standard dial markings and hand designs are available, and/or special finishes.

Standard Sizes

• 40915, 15” size
• 40924, 24” size
• 40940, 40” size
• 42915, 15” size
• 42924, 24” size

Table 1 Key
X indicates standard style
R indicates reversed screening
* indicates black on bright white dial

Table 2 Key
* Clocks are provided standard with a convex glass crystal
** If QB movement case depth is 17/8"
