DESCRIPTION

The bell hammer actuator is designed as a non intrusive means to automate an existing bell and hammer setup. At the top of the hour the hammer is raised and released to strike the bell just as if someone were pulling and releasing a rope. This setup maintains the original sound quality and preserves the original bell and hammer.

PART NUMBER: BELL-HMR-ACT-50

SPECIFICATIONS

- Up to 50lb bell hammer (push or pull)
- "Normally up" or "normally down" operation
